INTEGRATE. ENHANCE. EVOLVE.

79%

Of employees think employers should offer training for ChatGPT*

Unleash the power of Artificial Intelligence for your organisation.

Adaptive Intelligence's AI specialists craft tailored AI strategies and develop custom, precisely-tuned AI solutions to automate and streamline your manual business processes, taking them to new heights.

Benefits include:

- Substantial reduction in operational expenses, from 25% to 40%
- Consistent output and quality, as machines methodically adhere to predefined steps and algorithms
- Diminished risk of human errors, consequently minimising financial, reputational, and regulatory risks
- Rapid deployment timeframes, measured in weeks rather than months or years

AI CONSULTING SOLUTIONS

Self Learning AI

Adapt to consumer & market behaviour, fast and with no effort.

OpenAI
DeepMind
PaLM 2
databricks
LangChain
amazon S3
Microsoft Azure Data Lake
Azure Synapse Analytics

Adaptive Intelligence's AI consultancy service specialises in swiftly transforming your raw data into a fully deployed machine learning (ML) solution, accomplished within weeks.

From predictive capabilities to process automation and the cutting-edge advancements in Generative AI, we possess the expertise to uncover and harness untapped value across any industry.

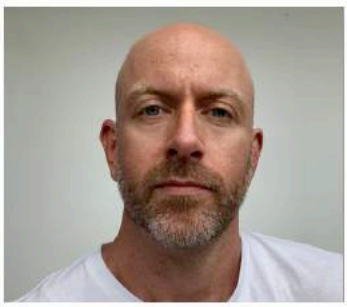

AI CONSULTING SOLUTIONS

Sherwin Clarke

Chief Architect - Artificial Intelligence solutions

Sher is a Python wizard, highly capable with large, complex software deployments in finance, telco, pharma and banking.

James Nash

Consulting Director

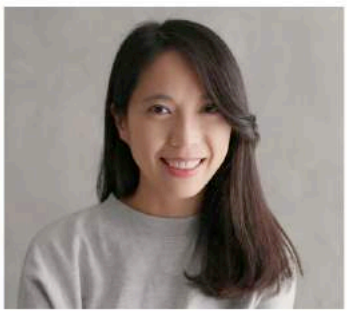

Evangelist for artificial intelligence with a background in consulting, AI, and international business.

Jason Wu

Developer

Jason studied computer science at the University of Melbourne and is skilled in the training and integration of LLM's using RAG and specific LLM tuning.

Lele Li

LLM and Machine Learning intern

Material science graduate at Imperial College. Lele has a passion for technology, AI, engineering and noodles.

Tailored Strategies for Transformative Automation

Bespoke AI systems for business & government

At Adaptive Intelligence, our AI experts meticulously craft tailored AI strategies and develop bespoke, finely-tuned AI solutions designed to automate and revolutionize your manual business processes, propelling them to unprecedented heights of efficiency and productivity.

To unlock the true value of AI, innovative integration and orchestration of intelligent and autonomous capabilities at the systemic level is paramount. This transformative journey spans five interconnected domains.

Our seasoned consulting team stands ready to guide you in realising the full business benefits of AI.

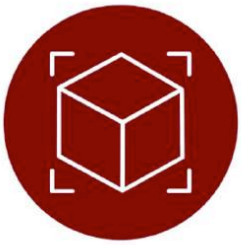

We begin by demystifying AI, helping your team grasp its value and potential risks, pragmatically defining the capabilities needed for your organisation to adopt and scale AI successfully. Then, we collaborate with you to integrate the intelligent, and autonomous capabilities that will transform and innovate the way you operate and compete in this Transformative Age.

5 Domains:

- Insights: Uncover deeper, faster insights that augment human cognition.
- Performance: Engineer systems that learn from data and experience, continually optimizing outcomes.
- Automation: Leverage intelligent and autonomous capabilities to catalyze operational transformation through automation.
- Experiences: Enhance human experiences with systems that predict, sense, learn, and adapt.
- Trust: Design, build, and monitor automated systems to foster and sustain trust.

Evolve.

**The time to start AI training was yesterday.
Lets get to work.**

30%

Of work hours will be automated over the next 24 months

Businesses stand to gain tremendously – if they can figure out how to train their employees quickly and equitably.

Although companies embracing AI can swiftly enhance efficiency and profitability, the true value of AI lies not in the systems themselves but in how organisations leverage them to augment human capabilities.

A significant majority of workers (six in 10) recognise the need to acquire new skills due to AI's impact, yet a staggering **88% lack confidence** in their employer's support for understanding this technology.

This should serve as a wake-up call for employers.

AI training is limited to a privileged few despite widespread impact

Out of the 60% of workers who acknowledge the need to acquire new skills due to AI's influence, a staggering third believe they must do so within the next year.

However, the market lacks adequate AI training opportunities for employees without bachelor's degrees, who constitute the majority of the workforce and more than 80% of the frontline workforce, totalling a staggering 112 million individuals.

Adaptive Intelligence's research into the AI training landscape has revealed a sobering reality: more than half of the available AI education programs require a bachelor's degree, catering primarily to engineers or executives.

There's very little training available for the non-tech professional – much less the frontline worker. That has to change.

Introduction to AI in the workplace

An introduction to Artificial intelligence: what it is, what it enables us to do, its capabilities and how it can help employees in their work and life.

- **Hone an understanding:** Grasp what is happening and why it matters
- **Make their work easier**: Learn tools and skills that allow them to do their job faster and better
- **Open doors & add value**: Enabling them to expanding the technical skills they already possess
- **Strategic awareness:** Understand how AI is changing the business world to develop pattern recognition and drive business strategy

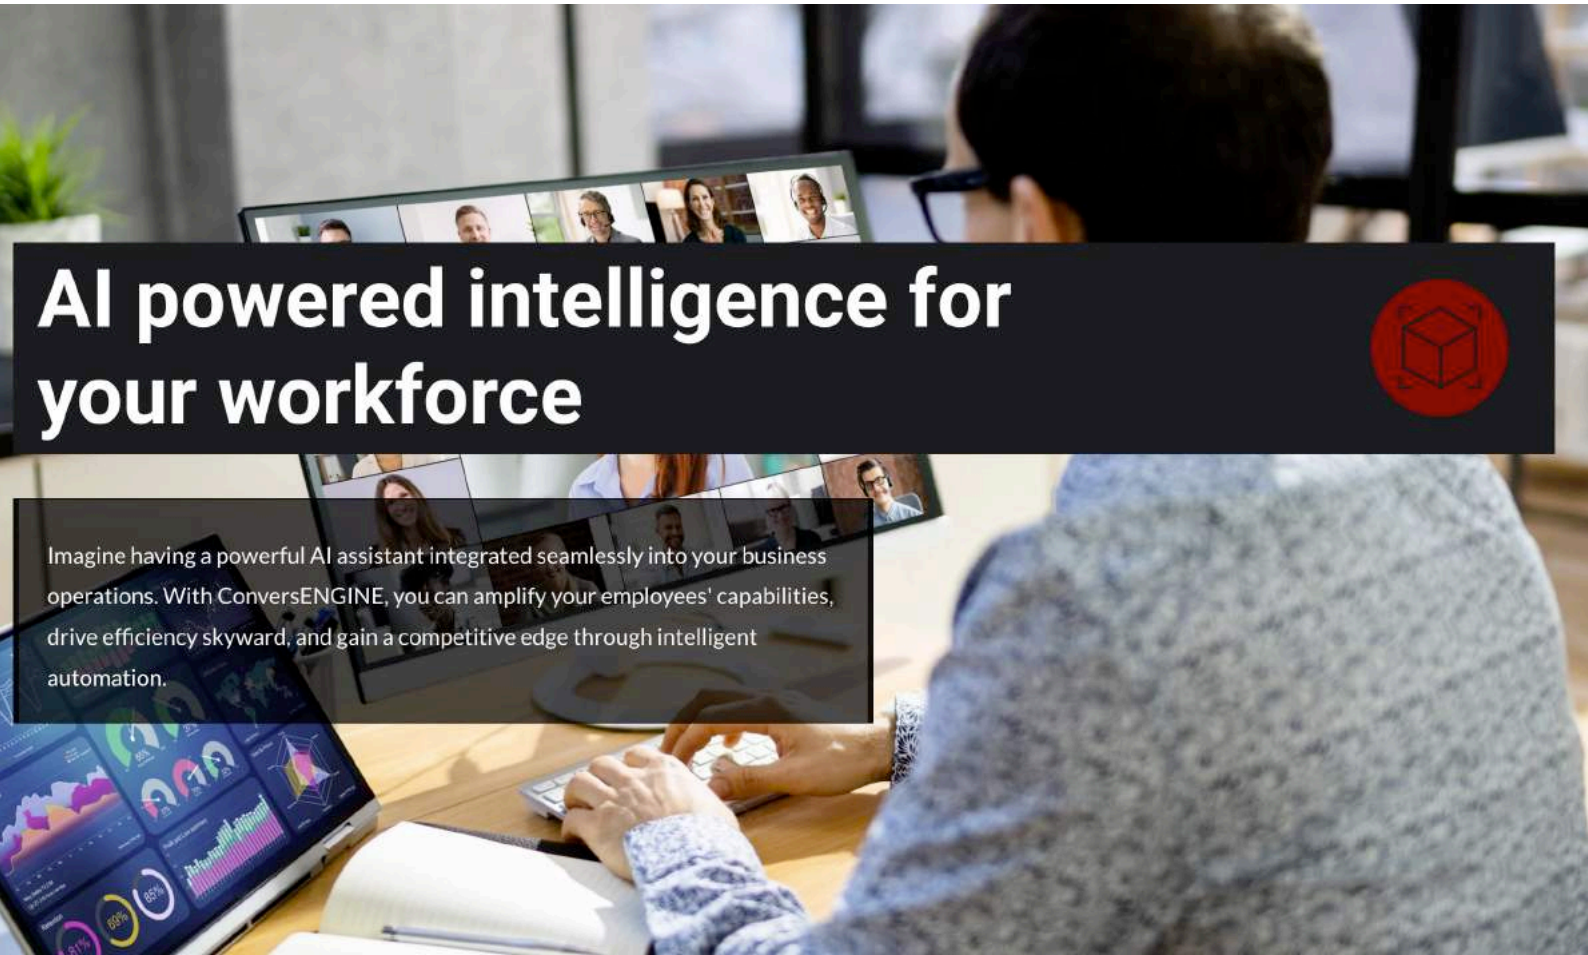

AI Workshops

In our workshops we spend time digging into the details of employees business roles and day to day work, exploring opportunities to use AI systems available to them in specific situations.

- **Role-based case studies:** Analyzing current workflows
- **Demonstrations:** AI capabilities applied to daily tasks
- **Hands-on exercises:** With AI tools/applications relevant to job duties
- **Best practice:** For sharing across roles/departments

The time to start AI training was yesterday. Lets get to work.

AI powered intelligence for your workforce

Imagine having a powerful AI assistant integrated seamlessly into your business operations. With ConversENGINE, you can amplify your employees' capabilities, drive efficiency skyward, and gain a competitive edge through intelligent automation.

Unlock knowledge within your organisation.

We work hand-in-hand with your team, creating custom AI agents using ConversENGINE to enable AI utilisation across virtually every business area. We connect your historic and live data streams, allowing you to provide simple instructions and receive on-point, clear answers instantaneously, on specific trained data sets.

No training is required, just ask the model as if they are talking to an expert, and they will get the information they need, massively leveraging your employees capabilities.

"Compare Q1 sales to the previous year."

"Show me customers in London by lifetime value."

"How many distribution centers do we have in the Southeast region?"

Amplify employee capabilities

- > Documents
- > Spreadsheets
- > Databases
- > Email and Chat

We train models on multiple types of data to drive effective decisions, improve business workflow and massively leverage every employees capability

Documents: Legal, technical, employee handbooks, contracts, proposals, SOP's, research papers.

Spreadsheets: Financial reports, accounts receivable / payable, budgets & forecasts, marketing performance, inventory reports.

Databases: CRM, recruitment data, customer service, supply chain, manufacturing, task tracking

Communications: Email, chat, contacts, notes.
